THIAGO GAMA SANTORO MOREIRA

Systems Developer | Backend (Go) and AI Integration | Computer Science Student
Vitória, ES, Brazil • +55 27 99915-6635 • tgsmoreira@gmail.com • linkedin.com/in/thiago-gama-santoro • github.com/ThiagoGama1

SUMMARY

Computer Science student (6th semester, UVV) and Systems Development intern at Rede Tribuna since September 2025. I build complete web systems in Go, from the database to the user interface, and integrate generative AI models into tools the company uses every day. AI is part of my workflow, with Claude Code in development, and I have a solid base in C, SQL and Computer Science fundamentals. Looking for an internship or junior role as a systems developer or software engineer working with AI.

TECHNICAL SKILLS

- **Generative AI:** LLM integration in production tools, prompt engineering, code-based validation of model output, Claude Code for development
- **Languages:** Go (Golang), C (pointers, dynamic memory allocation, data structures), Java, SQL, JavaScript
- **Backend & APIs:** Gin, GORM, RESTful APIs, MVC architecture, JWT and session authentication, bcrypt
- **Front-end:** HTML, CSS, JavaScript, REST API integration and Chrome extensions (Manifest V3)
- **Databases:** PostgreSQL, MySQL, SQLite, relational modeling, queries with JOINs and stored procedures
- **Tools:** Git, GitHub, Docker, Linux (VPS), deployment on Windows Server
- **Currently learning:** TypeScript

PROFESSIONAL EXPERIENCE

Systems Development Intern | Rede Tribuna
September 2025 – Present | Vitória, ES, Brazil

- Took over, on my own, the maintenance and evolution of a Chrome extension (Manifest V3, JavaScript) already in production, which uses generative AI agents to create the SEO fields for news articles in the Tribuna Online CMS. Implemented character limit control, re-calling the model only for the field that went over the limit. Used by the entire newsroom and presented as a case study at Google Summit Recife 2026, with support from the Google News Initiative.
- Built the extension's "Structure only" feature, which reorganizes only the text formatting and checks in code, not through instructions to the model, that the original content stayed intact. Fixed an XSS vulnerability and a missing timeout on the AI call, and validated the release with 10 real-world scenarios before production.
- Built a web system in Go where journalists select articles from the news portal and generate ready-to-send messages for the WhatsApp distribution groups, with an LLM that picks the emojis for each message. Used by the newsroom since October 2026, hosted on a Linux VPS.
- Built the full system (backend and front-end) of the public giveaway and promotions platform for the group's radio stations (Tribuna FM, Legal FM and Tribuna FM Cachoeiro), at promocao.atribunadigital.com.br. Backend in Go (Gin, GORM, PostgreSQL), with JWT authentication and integration with an external subscriber verification service.
- Built, from backend to interface, a web system for NR-1 compliance (psychosocial risk management in Brazilian labor law), used monthly by about 300 employees to assess the work environment. MVC architecture in Go (Gin, GORM), session authentication and bcrypt.
- Built, at HR's request, a self-service portal where about 300 employees update their own personal and banking information, with role-based access control, JWT and protected storage of sensitive data. Written in Go (Gin) and deployed as a service on Windows Server.
- Built an internal knowledge management system in Go (Gin, REST) and supported Python automations for the sales and finance departments, responsible for daily credit control and the generation of advertising insertion orders.

PERSONAL AND ACADEMIC PROJECTS

- **Task_Flow:** project manager with a Kanban board, priorities and deadlines, in Go (Gin, GORM), PostgreSQL and Docker Compose. University group project. github.com/ThiagoGama1/Task_Flow
- **listaTarefas:** REST API in Go with PostgreSQL and Docker, with a JavaScript front-end consuming the API. github.com/ThiagoGama1/listaTarefas
- **Competitive programming:** Codeforces problem solutions in C and Go. github.com/ThiagoGama1/exercicios_de_logica_codeforces

EDUCATION

Bachelor of Computer Science
Universidade Vila Velha (UVV), Brazil | 6th semester, expected graduation December 2027

CERTIFICATIONS AND LANGUAGES

- Prompt Engineering (AI Optimization) | Rocketseat
- Go: Building a REST API and Go: Managing and Optimizing Your API | Alura
- **Languages:** Portuguese (native) | English (intermediate) | Spanish (basic)
